Software engineer | Product and platform development

Cover letter

November 5, 2026

Dear Hiring Team,

I am a senior software engineer who turns ambiguous product needs into dependable systems. My work spans product and platform engineering: customer-facing applications, APIs, cloud infrastructure, delivery automation, observability, and the operating practices that keep software healthy after launch.

At BAAS Software, I own the complete software product lifecycle across web, mobile, cloud, DevOps, reliability, and security. I lead work from early planning and architecture through implementation, release, monitoring, support, and continuous improvement.

Earlier roles strengthened my experience in enterprise reliability, incident response, quality engineering, accessible interfaces, and client-focused delivery. I am most valuable where a team needs both breadth and follow-through: someone who can shape the architecture, write the software, improve the path to production, and remain accountable for the result in operation.

I would welcome the opportunity to discuss how that combination could support your products, engineering organization, and customers. Thank you for your consideration.

Sincerely,

Thomas Miller

Thomas Miller

SUMMARY

Platform-focused engineer with more than 10 years of experience building full-stack products and the systems that keep them reliable: cloud infrastructure, CI/CD, observability, identity and access management, scalable architecture, incident response, and technical leadership.

SKILLS

Languages

HTML, CSS, Sass, Less, JavaScript, TypeScript, Java, Go, Python, C#

API Development

Node.js, Express, Fiber, Gin, Django, Spring Boot, GraphQL, Headless CMS

Infrastructure

AWS, Docker, Docker Swarm, Kubernetes, Serverless, Terraform, Layer 4 and 7 Networking, HAProxy, NGINX, Load Balancing

DevOps

CI/CD, GitOps, Git, GitHub, GitLab, ECR, Artifactory, Docker Hub, GitHub Actions, GitLab CI/CD, Jenkins, CircleCI, Fleet, Helm, Prometheus, Grafana, ELK, Datadog, Splunk

Testing

Unit Testing, Integration Testing, End-to-End Testing, Performance Testing, Security Testing

Software Architecture

Monoliths, Microservices, Domain-Driven Design, Test-Driven Development, Event-Driven Architecture, System Design

Project Management

Agile, Scrum, Cross-Functional Collaboration, Mentoring

Web Development

React, Next.js, Tailwind CSS, Bootstrap, Context API, Redux, Zustand, Jest, Vite, Selenium, Storybook

App Development

Flutter, Ionic, .NET, React Native, Three.js, Unity, Unreal Engine

Security, Authentication, and Authorization

IAM, JWT, Session Management, Cookies, CORS, CSRF, RBAC, PBAC, Keycloak, Okta, Active Directory, LDAP

Site Reliability Engineering

High Availability, Latency Optimization, Auto Scaling, Monitoring, Incident Response, Post-Incident Review

Data and Databases

Data Modeling, Normalization, ER Diagrams, Data Integrity, PostgreSQL, MySQL, MongoDB, DynamoDB, Cassandra, Redis, RabbitMQ, Kafka

Technical Documentation

API Documentation, Code Documentation, Architecture, Requirements, System Design, Deployment, User Manuals, Swagger, Postman, UML, Lucidchart, Docusaurus

EDUCATION

Bachelor of Business Administration (BBA)

Texas Tech University | Information Technology - Emphasis in Application Development

Fall 2015 - Spring 2020

ACCOLADE

Vice President

Quality Engineering Society, USAA

March 2021 - July 2022

EMPLOYMENT HISTORY

Senior Software Engineer

June 2022 - Present

BAAS Software | Remote

POSITION SUMMARY

Own the complete software product lifecycle across web, mobile, cloud, DevOps, reliability, and security.

SELECTED ACCOMPLISHMENTS

- Led products from concept and client discovery through architecture, full-stack implementation, launch, monitoring, and ongoing support.
- Built customer-facing web and mobile applications, APIs, automation systems, and internal platforms across cloud and containerized environments.
- Created GitHub Actions release pipelines for AWS, Cloudflare, Docker, web, and mobile targets; reduced release time by 40% while helping maintain 99.9% uptime.
- Established production monitoring, alerting, and incident workflows with Prometheus, Grafana, and Kibana, carrying corrective work through deployment.
- Strengthened platform security with least-privilege AWS IAM policies, access-risk remediation, and OAuth 2.0, SSO, 2FA, and secure session flows.
- Turned ambiguous business requests into executable roadmaps and production systems while coordinating engineering, product, operations, and customers.

Software Engineer III

June 2020 - July 2022

USAA | Remote

POSITION SUMMARY

Strengthened enterprise reliability, delivery automation, quality engineering, and incident response.

SELECTED ACCOMPLISHMENTS

- Automated deployment and development workflows to improve release consistency, service stability, and recovery from failed changes.
- Implemented real-time monitoring and alerting, supported production incidents, and turned post-incident findings into reliability improvements.
- Partnered with engineering, security, and operations to address performance bottlenecks, vulnerabilities, and recurring operational risks.
- Advanced automated integration, regression, and performance testing across teams as Vice President of the Quality Engineering Society.
- Mentored engineers in site reliability, troubleshooting, and quality practices while contributing to resilient service designs.

EMPLOYMENT HISTORY (CONTINUED)

Software Engineer

July 2018 - May 2020

Web Plant Media | Remote

POSITION SUMMARY

Built custom WordPress and React experiences while modernizing client platforms, cloud infrastructure, and delivery practices.

SELECTED ACCOMPLISHMENTS

- Built reusable React components and custom WordPress themes that standardized responsive navigation, content, forms, and interactive experiences.
- Led client UI/UX work from requirements and user flows through design, accessible implementation, and iterative delivery.
- Migrated client websites to AWS to improve performance, availability, security, and hosting efficiency.
- Added monitoring, alerting, logging, backups, and disaster-recovery procedures to reduce operational risk and speed restoration.
- Improved page speed, search visibility, accessibility, and data protection across a portfolio of client sites.

Software Engineer

February 2017 - July 2018

Caprock Custom Apps

POSITION SUMMARY

Delivered custom web and mobile products from discovery and architecture through app-store release and support.

SELECTED ACCOMPLISHMENTS

- Defined product scope and technical plans directly with clients and cross-functional teams, then delivered web and mobile applications through launch.
- Built front-end experiences, Node.js and Express services, APIs, integrations, and data workflows for custom products.
- Improved service architecture and request handling, reducing response times by up to 30% for key features.
- Released multiple applications through mobile app stores and managed updates and post-launch support.
- Introduced reusable patterns that reduced technical debt and shortened debugging time.

IT Support Technician / Supervisor

November 2015 - August 2017

IT Help Central

POSITION SUMMARY

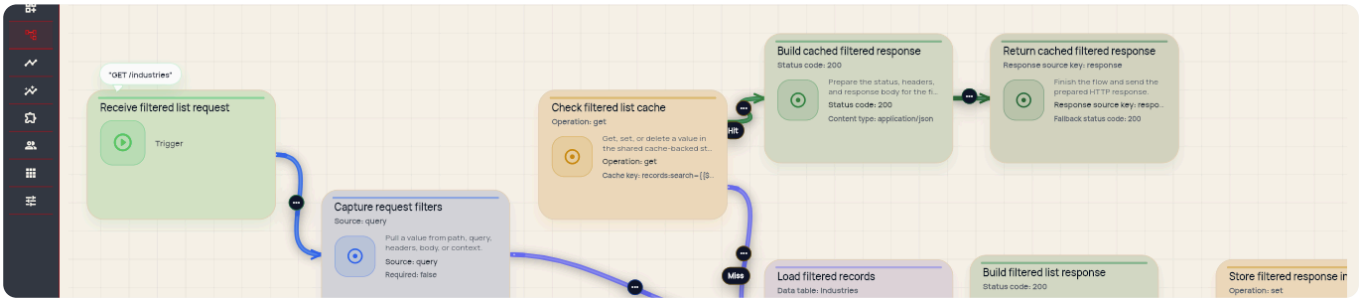

Resolved complex technology issues, led support operations, and created knowledge resources for a large university community.

SELECTED ACCOMPLISHMENTS

- Earned promotion to Lead Technician, coordinated daily support operations, and led technical projects for a large university community.
- Resolved software, hardware, account, network, and endpoint issues for students, faculty, and staff across walk-up, phone, and on-site channels.
- Created searchable troubleshooting documentation used by thousands of Texas Tech University users and support technicians.
- Investigated root causes, coordinated escalations with specialized IT teams, and communicated solutions clearly to people with varied technical experience.

EazyHQ

Lead Software Engineer | 2026

OVERVIEW

A modular workspace operating system for projects, data, automation, content, and team workflows.

WHAT I BUILT

- Designed a registry-first add-on architecture with build-time linking and workspace-level enablement.
- Built event-driven automation infrastructure covering subscriptions, queued steps, waits, execution logs, and run histories.
- Developed workspace dashboards with configurable tabs, permission-aware editing, and add-on-provided widgets.
- Implemented platform capabilities for forms, structured data, APIs, sites, email, calendars, storage, reports, directories, and wikis.
- Created a cross-platform Flutter interface backed by a Go service layer, PostgreSQL, Redis, and containerized deployment.
- Established GitHub Actions and Docker-based delivery workflows for the API and web application.

TECHNOLOGIES

Flutter, Dart, Go, PostgreSQL, Redis, Docker, GitHub Actions, Caddy

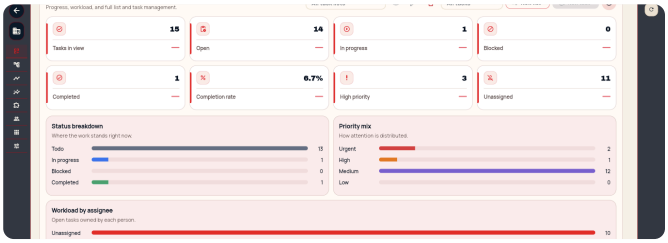

ENGINEERING FOCUS

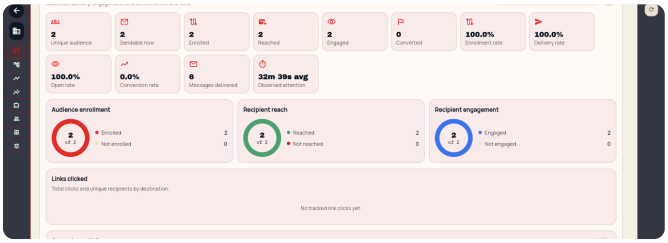

The project demonstrates full-stack platform design: authorization boundaries, stable extension contracts, event-driven execution, operational recovery, responsive interface systems, and deployment automation.

PRODUCT VIEWS

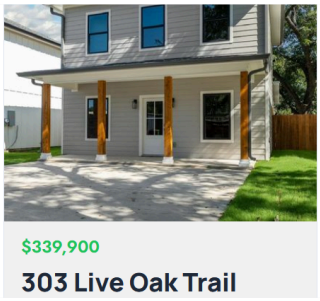

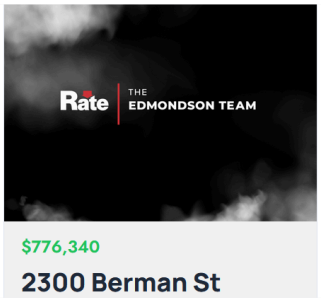

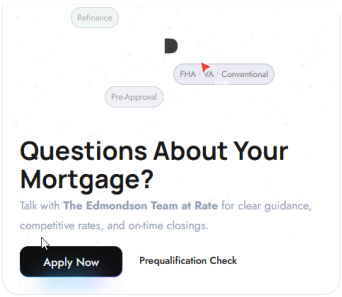

Listings+

Full-Stack Software Engineer | 2026

OVERVIEW

An AI-assisted real-estate platform that turns natural-language intent into structured searches, retrieves live listings, and enriches grounded property results.

WHAT I BUILT

- Designed a retrieval workflow that uses OpenAI structured output to turn natural-language home preferences into validated property filters, retrieves live inventory, and falls back gracefully when a model response or search fails.
- Built Go API endpoints for AI-assisted home finding, UUID-based result retrieval, and merged property-detail views across eXp Realty, Century 21, and enrichment sources.
- Persisted search summaries, generated filters, result sets, sources, and timestamps in PostgreSQL with JSONB for traceability and repeatable retrieval.
- Implemented Redis and in-memory caching, a PostgreSQL-backed property-detail cache, Typesense city lookup, listing normalization, enrichment, and image aggregation.
- Developed the Next.js interface with responsive listing cards, comparison tables, image carousels, accessible primitives, and server-action boundaries for search and lead workflows.
- Containerized PostgreSQL, Redis, Typesense, the Go API, and Caddy; prepared the front end for Cloudflare deployment with OpenNext.

TECHNOLOGIES

Next.js, React, TypeScript, Go, OpenAI API, PostgreSQL, Redis, Typesense, Docker, Caddy, Cloudflare

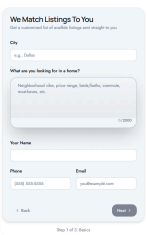

ENGINEERING FOCUS

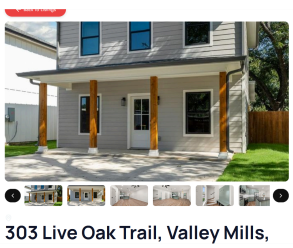

The model structures buyer intent; the API retrieves current source data; and the interface presents grounded results with persisted provenance. The work spans AI orchestration, external data integration, resilient services, caching, deployment, and responsive information design.

PRODUCT VIEWS

DOCHUB - Secure Document Sharing Platform

Lead Software Engineer | 2026

OVERVIEW

A secure workspace for creating, organizing, versioning, and sharing connected documents and proposals.

WHAT I BUILT

- Designed workspace-scoped access and a document-code path for sharing individual documents with external readers.
- Built a passwordless sign-in flow using a six-digit email code for workspace access.
- Organized documents into a navigable tree so proposals, plans, and decisions retain their relationships.
- Developed an authoring experience with Markdown editing, preview, media selection, and document publishing states.
- Added version-aware document workflows so teams can revise content while preserving a clear publishing path.
- Created a responsive reading experience for long-form documents and shared collections.

TECHNOLOGIES

Next.js, React, TypeScript, Markdown, Cloud Storage

ENGINEERING FOCUS

DOCHUB demonstrates access boundaries, thoughtful document organization, a clear author-to-reader workflow, and secure sharing across internal workspaces and external recipients. The interface is designed to keep related information together while making the current document easy to read and act on.
