Cover letter

November 5, 2026

Dear Hiring Team,

I am a senior software engineer who turns ambiguous product needs into dependable systems. My work spans product and platform engineering: customer-facing applications, APIs, cloud infrastructure, delivery automation, observability, and the operating practices that keep software healthy after launch.

At BAAS Software, I own the complete software product lifecycle across web, mobile, cloud, DevOps, reliability, and security. I lead work from early planning and architecture through implementation, release, monitoring, support, and continuous improvement.

Earlier roles strengthened my experience in enterprise reliability, incident response, quality engineering, accessible interfaces, and client-focused delivery. I am most valuable where a team needs both breadth and follow-through: someone who can shape the architecture, write the software, improve the path to production, and remain accountable for the result in operation.

I would welcome the opportunity to discuss how that combination could support your products, engineering organization, and customers. Thank you for your consideration.

Sincerely,

Thomas Miller

Thomas Miller

Senior Software Engineer

Platform Engineering | DevOps | Site Reliability | Secure Systems

SUMMARY

Platform-focused engineer with more than 10 years of experience building full-stack products and the systems that keep them reliable: cloud infrastructure, CI/CD, observability, identity and access management, scalable architecture, incident response, and technical leadership.

SKILLS

Languages

HTML, CSS, Sass, Less, JavaScript, TypeScript, Java, Go, Python, C#

API Development

Node.js, Express, Fiber, Gin, Django, Spring Boot, GraphQL, Headless CMS

Infrastructure

AWS, Docker, Docker Swarm, Kubernetes, Serverless, Terraform, Layer 4 and 7 Networking, HAProxy, NGINX, Load Balancing

DevOps

CI/CD, GitOps, Git, GitHub, GitLab, ECR, Artifactory, Docker Hub, GitHub Actions, GitLab CI/CD, Jenkins, CircleCI, Fleet, Helm, Prometheus, Grafana, ELK, Datadog, Splunk

Testing

Unit Testing, Integration Testing, End-to-End Testing, Performance Testing, Security Testing

Software Architecture

Monoliths, Microservices, Domain-Driven Design, Test-Driven Development, Event-Driven Architecture, System Design

Project Management

Agile, Scrum, Cross-Functional Collaboration, Mentoring

Web Development

React, Next.js, Tailwind CSS, Bootstrap, Context API, Redux, Zustand, Jest, Vite, Selenium, Storybook

App Development

Flutter, Ionic, .NET, React Native, Three.js, Unity, Unreal Engine

Security, Authentication, and Authorization

IAM, JWT, Session Management, Cookies, CORS, CSRF, RBAC, PBAC, Keycloak, Okta, Active Directory, LDAP

Site Reliability Engineering

High Availability, Latency Optimization, Auto Scaling, Monitoring, Incident Response, Post-Incident Review

Data and Databases

Data Modeling, Normalization, ER Diagrams, Data Integrity, PostgreSQL, MySQL, MongoDB, DynamoDB, Cassandra, Redis, RabbitMQ, Kafka

Technical Documentation

API Documentation, Code Documentation, Architecture, Requirements, System Design, Deployment, User Manuals, Swagger, Postman, UML, Lucidchart, Docusaurus

EDUCATION

Bachelor of Business Administration (BBA)

Texas Tech University | Information Technology - Emphasis in Application Development

Fall 2015 - Spring 2020

ACCOLADE

Vice President

Quality Engineering Society, USAA

November 2020 - July 2022

EMPLOYMENT HISTORY

Senior Software Engineer
June 2022 - Present

BAAS Software | Remote

Own the complete software product lifecycle across web, mobile, cloud, DevOps, reliability, and security.

- Lead products from initial idea and concept validation through requirements, planning, architecture, implementation, testing, production launch, monitoring, support, and continuous improvement.
- Design and build customer-facing web applications, mobile applications, backend services, APIs, data models, automation systems, and internal platforms across the complete software development lifecycle.
- Prepare and release production web and mobile applications, manage versioning and app-store submissions, issue updates, support users, and operate products after launch.
- Build GitHub Actions pipelines and repeatable release workflows for cloud, containerized, serverless, static, web, and mobile targets across AWS, Cloudflare, Docker-based platforms, and application stores.
- Improve deployment pipelines, operational readiness, and site reliability, helping maintain 99.9% uptime while reducing release time by 40%.
- Implement monitoring, logging, dashboards, alerting, and production diagnostics with Prometheus, Grafana, and Kibana; investigate incidents and carry corrective work through deployment.
- Design, deploy, and maintain AWS infrastructure, improving application performance and release efficiency while controlling infrastructure costs.
- Create least-privilege AWS IAM policies, remediate unauthorized-access risks, and support a 100% security-audit compliance rate; deliver OAuth 2.0, SSO, 2FA, magic links, temporary codes, and secure session workflows.
- Translate ambiguous business ideas into executable roadmaps, architecture decisions, delivery plans, and production systems while coordinating stakeholders across engineering, product, operations, and customers.

Software Engineer III
June 2020 - July 2022

USAA | Remote

Strengthened enterprise reliability, delivery automation, quality engineering, and incident response.

- Served as Vice President of the Quality Engineering Society and advanced automated, integration, regression, and performance-testing practices across engineering teams.
- Automated deployment pipelines and repeatable development workflows, improving release consistency, service stability, and recovery from change-related failures.
- Partnered across engineering, security, and operations to analyze performance, remediate vulnerabilities, reduce operational risk, and prevent recurring failures.
- Implemented real-time monitoring and alerting, supported production incidents, led post-incident reviews, and converted findings into durable reliability improvements.
- Contributed to resilient application and service designs aligned with availability, capacity, performance, and maintainability requirements.
- Guided engineers in SRE, testing, troubleshooting, and quality practices while helping teams adopt stronger engineering standards.

Software Engineer
July 2018 - May 2020

Web Plant Media | Remote

Built custom WordPress and React experiences while modernizing client platforms, cloud infrastructure, and delivery practices.

- Developed reusable React component libraries for WordPress themes, giving teams a consistent foundation for navigation, content modules, forms, media, and interactive page experiences.

Software Engineer (continued)
July 2018 - May 2020

Web Plant Media | Remote

- Designed and built independent WordPress themes with custom templates, responsive layouts, configurable content patterns, and maintainable front-end architecture.
- Led UI/UX work from information architecture and user flows through wireframes, visual design, responsive implementation, and iterative refinement with clients and stakeholders.
- Created accessible, mobile-first interfaces and reusable design patterns that improved consistency across client sites and reduced repeated implementation work.
- Planned and executed client website migrations to AWS, improving performance, availability, security, scalability, and hosting efficiency.
- Introduced application monitoring, alerting, and actionable logging to accelerate issue detection, troubleshooting, and performance analysis.
- Developed and tested backup and disaster-recovery procedures that reduced operational risk and supported faster service restoration.
- Improved page speed, search visibility, accessibility, and data protection across a portfolio of client websites.
- Translated business requirements into practical technical solutions, managed expectations, and supported client systems through launch and ongoing maintenance.

Software Engineer
February 2017 - July 2018

Caprock Custom Apps

Delivered custom web and mobile products from discovery and architecture through app-store release and support.

- Worked directly with clients and cross-functional teams to define requirements, evaluate constraints, shape product scope, and prepare solution plans tied to business outcomes.
- Built custom web and mobile applications across front-end interfaces, Node.js and Express services, APIs, integrations, and data workflows.
- Optimized service architecture and request handling, reducing response times by up to 30% for key application features.
- Carried products from discovery and planning through development, testing, deployment, documentation, launch, and post-production support.
- Prepared and released multiple applications through mobile app stores, managed updates, and resolved post-launch technical issues.
- Introduced reusable patterns and scalable codebase practices that reduced technical debt and shortened debugging time.

IT Support Technician / Supervisor
November 2015 - August 2017

IT Help Central

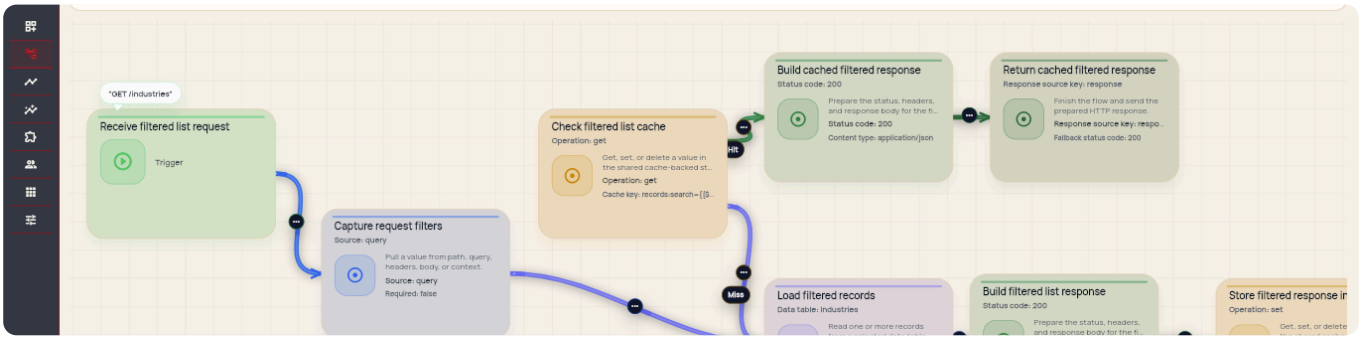

Resolved complex technology issues, led support operations, and created knowledge resources for a large university community.

- Diagnosed and resolved software, hardware, account, network, and endpoint issues for students, faculty, and staff through walk-up, phone, and on-site support.
- Created and maintained searchable troubleshooting documentation used by thousands of Texas Tech University users and support technicians.
- Earned promotion to Lead Technician, coordinated day-to-day support work, assumed additional operational responsibilities, and led technical projects.
- Triaged requests, investigated root causes, escalated effectively, and collaborated with specialized IT teams through resolution.
- Explained technical issues and solutions clearly to people with varied experience while maintaining a service-focused support experience.

EazyHQ

Active development

Lead Software Engineer | June 2026

OVERVIEW

A modular workspace operating system for projects, data, automation, content, and team workflows.

WHAT I BUILT

- Designed a registry-first add-on architecture with build-time linking and workspace-level enablement.
- Built event-driven automation infrastructure covering subscriptions, queued steps, waits, execution logs, and run histories.
- Developed workspace dashboards with configurable tabs, permission-aware editing, and add-on-provided widgets.
- Implemented platform capabilities for forms, structured data, APIs, sites, email, calendars, storage, reports, directories, and wikis.
- Created a cross-platform Flutter interface backed by a Go service layer, PostgreSQL, Redis, and containerized deployment.
- Established GitHub Actions and Docker-based delivery workflows for the API and web application.

TECHNOLOGIES

Flutter, Dart, Go, PostgreSQL, Redis, Docker, GitHub Actions, Caddy

ENGINEERING FOCUS

The project demonstrates full-stack platform design: authorization boundaries, stable extension contracts, event-driven execution, operational recovery, responsive interface systems, and deployment automation.

PRODUCT VIEWS

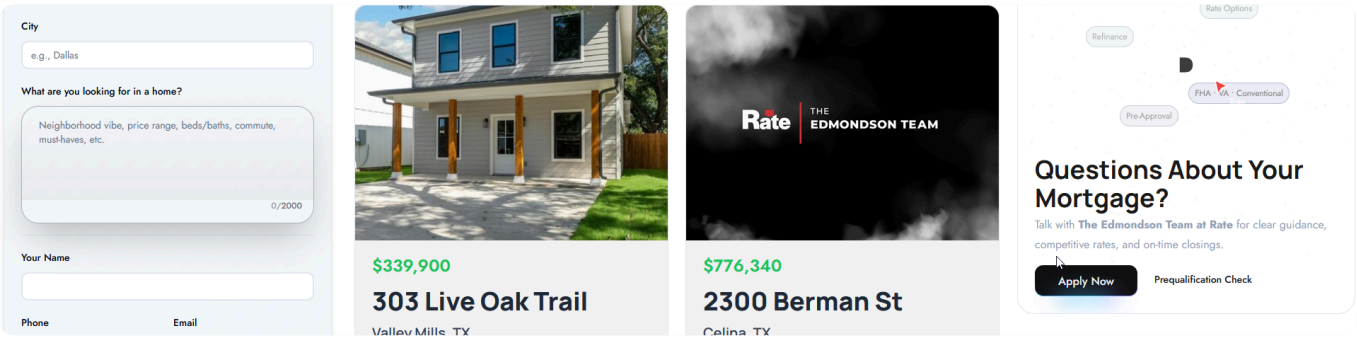

Listings+

Portfolio snapshot

Full-Stack Software Engineer | 2025

OVERVIEW

An AI-assisted real-estate platform that turns natural-language intent into structured searches, retrieves live listings, and enriches grounded property results.

WHAT I BUILT

- Designed a RAG-style retrieval workflow that converts natural-language home preferences into validated filters, retrieves live inventory, and grounds the user experience in source property data.
- Integrated OpenAI chat completions with strict JSON output for bedrooms, bathrooms, price, square footage, amenities, and property types, including graceful fallback when model output or filtered retrieval fails.
- Built Go API endpoints for AI-assisted home finding, UUID-based result retrieval, and merged property-detail views across eXp Realty, Century 21, and enrichment sources.
- Persisted search summaries, generated filters, result sets, sources, and timestamps in PostgreSQL with JSONB for traceability and repeatable retrieval.
- Implemented layered performance controls with Redis caching, in-memory TTL caches, and a PostgreSQL-backed property-detail cache.
- Added Typesense-powered city lookup, listing normalization, property-detail enrichment, and image aggregation.
- Developed the Next.js interface with responsive listing cards, comparison tables, image carousels, accessible primitives, and server-action boundaries for search and lead workflows.
- Containerized PostgreSQL, Redis, Typesense, the Go API, and Caddy; prepared the front end for Cloudflare deployment with OpenNext.

TECHNOLOGIES

Next.js, React, TypeScript, Go, OpenAI API, PostgreSQL, Redis, Typesense, Docker, Caddy, Cloudflare

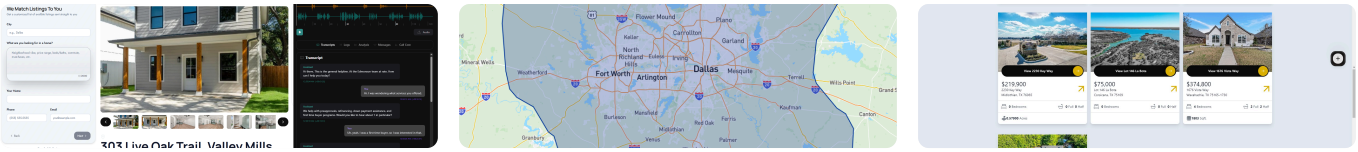

ENGINEERING FOCUS

This is a retrieval-augmented workflow rather than a vector-embedding RAG implementation: the model structures user intent, the API retrieves current source data, and the interface presents grounded results with persisted provenance. The project demonstrates end-to-end product engineering across AI orchestration, external data integration, resilient backend services, caching, deployment, and responsive information design.

PRODUCT VIEWS

PDF Generator Service

Portfolio snapshot

Backend Software Engineer | 2024

OVERVIEW

A TypeScript service that renders structured content into polished PDFs and publishes them to S3-compatible storage.

WHAT I BUILT

- Designed a small Express API for document-generation requests.
- Implemented reusable cover and content-page layouts for structured project data.
- Integrated Puppeteer and Chromium for predictable server-side PDF rendering.
- Added S3-compatible object storage and public file URL responses.
- Containerized the service for repeatable builds and deployment.
- Added temporary-file cleanup and environment-driven configuration.

TECHNOLOGIES

TypeScript, Express, Puppeteer, AWS SDK, Docker

ENGINEERING FOCUS

The service demonstrates document rendering, cloud storage integration, short-lived file management, container packaging, and the operational concerns involved in exposing a rendering endpoint safely.
